

Accelerate Transformation with ISW and AWS

AWS-funded Migration Assessment for NZ Financial Services

AWS and ISW offer a structured, risk-free starting point: the AWS-funded Migration Assessment. This comprehensive evaluation analyses your current IT environment, identifies cost and compliance gaps, and delivers a clear roadmap for secure cloud migration. The assessment helps you understand exactly what modernisation means for your organisation with zero financial risk and no obligation to proceed. Fully funded by AWS. **Delivered in 4–6 weeks.** Zero disruption to operations.

Benefits

- **Reduce compliance risk**

Build confidence with RBNZ-aligned cloud architecture and automated compliance monitoring that simplifies audit processes.

- **Lower operational costs**

Move from capital-intensive infrastructure to scalable, pay-as-you-go models that can reduce total IT costs by 30–50%.

- **Accelerate innovation**

Free up IT resources and budget to invest in AI-powered fraud detection, real-time analytics, and enhanced customer experiences.

- **Strengthen security posture**

Access enterprise-grade security controls, encryption, and threat detection that exceed what most institutions can build internally.

- **Gain strategic clarity**

Receive executive-ready documentation with clear recommendations, risk analysis, and business case justification for cloud adoption.

Powering your innovation

With the MAP Assess, ISW remove the guesswork so you can innovate with confidence. In 2–3 weeks, you will receive the evidence to move forward: an executive business case, NZ-resident target architecture, and clear, quick wins, so teams can focus on building rather than maintaining infrastructure. The AWS platform then unlocks modern services (managed databases, containers/serverless, analytics and AI) with strong security and DR patterns, giving you the agility to ship faster while controlling cost and risk.

Modernise & Scale with AWS

AWS provides a secure, reliable platform for financial institutions to modernise with confidence. Partnering with ISW through the AWS Migration Acceleration Program (MAP) gives you a clear, structured path to cloud adoption—built around security, compliance, and measurable business outcomes. The No-Cost AWS Migration Assessment delivers an executive business case, NZ-resident target architecture, and a step-by-step migration roadmap tailored to your regulatory and operational priorities. Delivered in just 4–6 weeks, fully funded by AWS, it provides the clarity and confidence to modernise at your own pace.

Resources

- **AWS Migration Acceleration Program (MAP)**

A comprehensive migration program that provides funding, tools, and expert guidance through three phases (Assess, Mobilise, Migrate & Modernise) to help accelerate cloud migration while reducing costs and risks.

- **AWS Migration Evaluator**

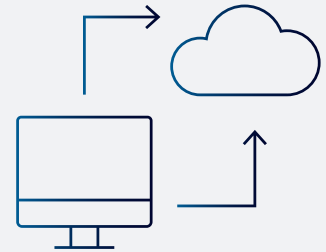

A complimentary migration assessment service that creates a data-driven business case by analysing your current on-premises environment and projecting AWS costs based on actual resource utilisation and provisioning.

Link: <https://aws.amazon.com/migration-evaluator/>

- **AWS Cloud Adoption Framework (AWS CAF)**

A comprehensive framework that provides best practices and guidance across six perspectives (Business, People, Governance, Platform, Security, Operations) to help organisations plan, execute, and accelerate their cloud transformation journey.

AWS-FUNDED ASSESS START HERE

ISW's AWS Cloud Migration Assessment helps New Zealand financial institutions modernise infrastructure while maintaining RBNZ compliance and security standards.

Our cloud architects evaluate your current environment, identify cost optimisation opportunities, and build a detailed migration roadmap aligned with regulatory requirements.

In 4–6 weeks, you receive comprehensive analysis including migration readiness evaluation, TCO modelling comparing current costs to AWS, security and compliance assessment mapped to RBNZ Guidance on Cyber Resilience, and a customised roadmap for secure cloud adoption.

Financial organisations gain strategic clarity before committing resources. Assessments typically identify 30–50% infrastructure cost reductions while addressing compliance obligations, improving system resilience, and enabling AI-powered capabilities for fraud detection and customer experience enhancement.
